

Julia on trial

fitting in our tech radar.

Martijn Visser

2026-01-06

Introduction

Martijn Visser

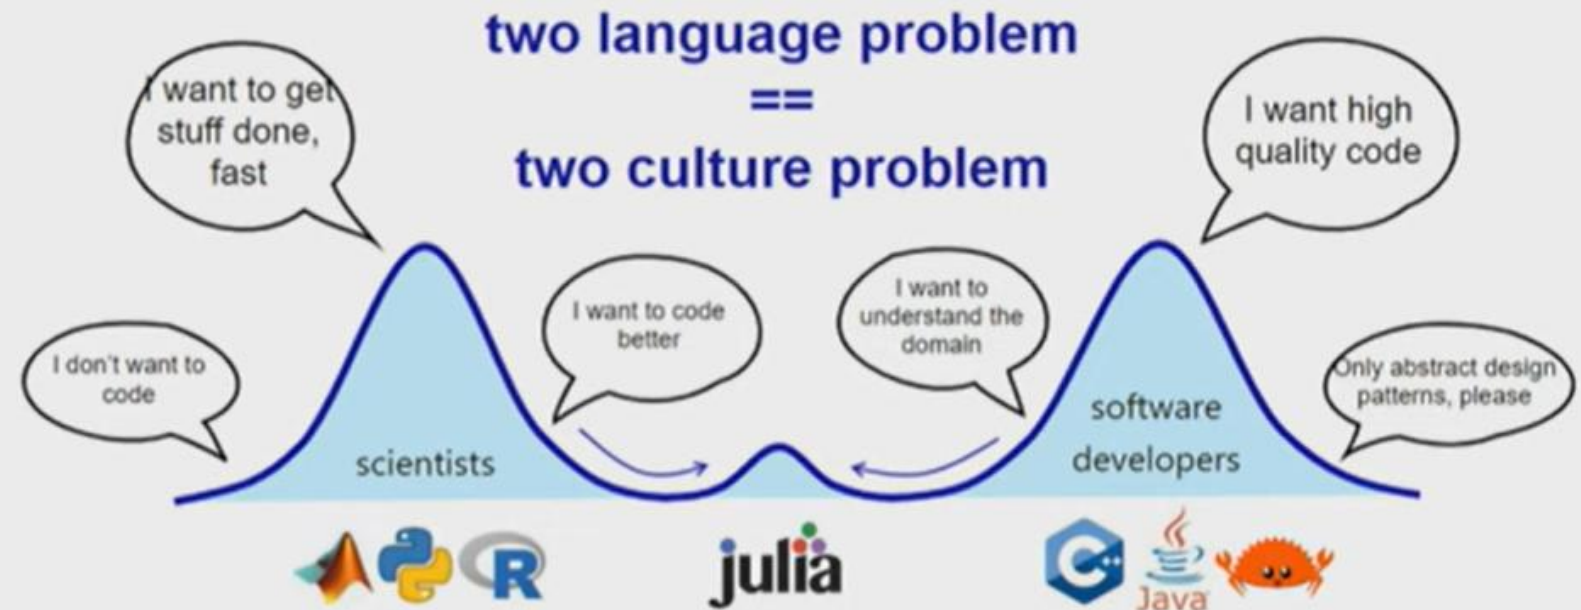

- Hydrologist at Deltares, the Netherlands
- JuliaGeo maintainer
- GitHub: visr

Deltares

- Independent research institute for applied research in the field of water and subsurface.

Conway's law (and reverse)

Wflow

github.com/Deltares/Wflow.jl

- Spatially distributed hydrological model
- Originally written in Python
- Replacement in Julia
- Free and open-source software (MIT)

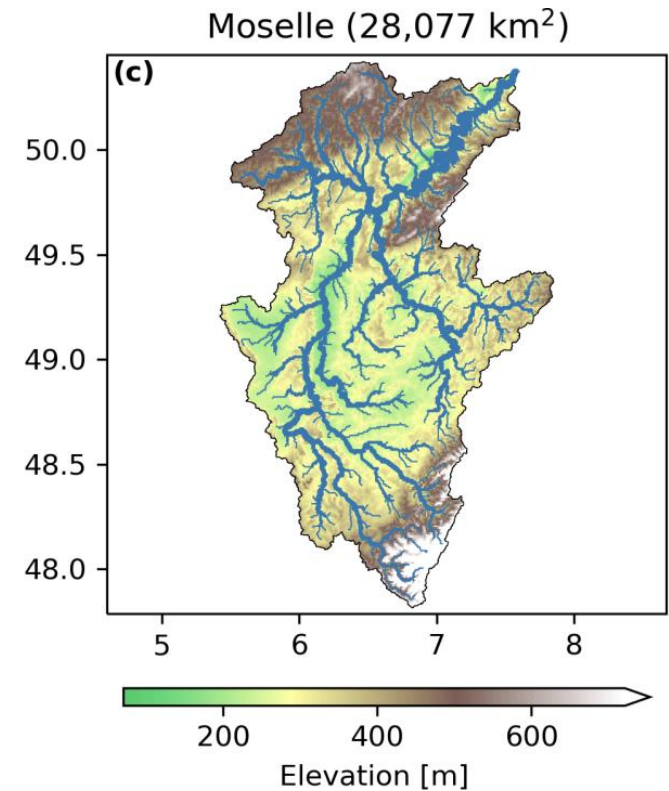

Ribasim

github.com/Deltares/Ribasim

- River basin planning and management software
- Legacy Fortran code dating back to the 1980s
- Replacement in Julia based on SciML & JuMP
- Used for Dutch national hydrological model
- Free and open-source software (MIT)

Deltares

Power to the user, in Julia or not

- The user shouldn't need to know Julia to use Ribasim
- **Ribasim needs to integrate with existing workflows**
- We want to deliver compiled executables 
- 👉 PackageCompiler.jl / juliac

techradar.deltares.nl

- **Adopt:** C++, Python
 - **Trial:** Julia
 - **Assess:** Rust, Fortran
 - **Hold:** R, Matlab
-
- **Trial.** Blips we think are ready for use, and for which we are planning or performing trials. After trial, we will decide on their promotion to Adopt or demotion to Hold.
-
- **Motivation:** Julia seems to be a language with high potential, but there are some missing components involving ease of use for developers, and security scanning.

Things that can help

- [JuliaLang blog: Launching the Julia Security Working Group](#)
- [JETLS - new language server](#)
- [JuliaLang/JuliaC.jl](#)
- github.com/visr/Jl.jl – rethinking the cli experience and defaults
- Chance to change defaults?
 - JULIA_NUM_THREADS=auto
 - JULIA_PROJECT=@script
 - juliaup config autoinstallchannels true
 - juliaup config manifestversiondetect true
 - instantiate
 - workspaces
